

Lucky Rathee

AI Engineer

Bahadurgarh, Haryana, India | lucky.dev2311@gmail.com | +91 7988452163 | [LinkedIn](#) | [GitHub](#) |

SUMMARY

AI & Automation Engineer specializing in agentic AI workflows, RAG architectures, and resilient data pipelines. Experienced in orchestrating multi-agent LLM systems, headless browser automation, and high-throughput B2B operations.

EDUCATION

Chandigarh University

B.E. Computer Science

July 2026

TECHNICAL SKILLS

AI & LLM Systems:

Agentic Ai, AI Orchestration, MCP, RAG, LangChain, Hermes, Claude, Gemini, Groq, pgvector

Automation & Scraping:

Playwright, Chromium, n8n, Make.com, Apify, Web Scraping

Languages:

Python, TypeScript, JavaScript, SQL, C++

Backend & Web:

FastAPI, Node.js, Next.js, React, Supabase, Tailwind, MongoDB

Cloud & DevOps:

Docker, Docker Compose, AWS EC2, Google Cloud Run, Caddy, APIs

DOMAIN FOCUS

- Agentic AI Systems
- Desktop OS Automation
- RAG & Vector Retrieval
- Deterministic Data Pipelines
- Reliable Web Scraping
- Fast APIs Integration

RESEARCH

STAI 2026:

Accepted: "6G ultra-low-latency communication for remote medical services."

Conferences (2026):

Authored & presented AI research at AIR 2026, ITAI 2026, and BIDA 2026.

EXPERIENCE

Freelance AI Engineer & Automation Architect

Remote

Independent Contractor

May 2026 – Present

- Engineered an automated lead dispatch system with Google Sheets and Apps Script, orchestrating quota distribution and real-time manager synchronization.
- Architected self-hosted n8n automation pipelines on Google Cloud Run and AWS EC2 via Docker Compose and Caddy reverse proxy for custom domain routing.
- Designed and deployed a Telegram-based freelancer ops voice assistant using n8n to streamline task management, communication, and administrative tasks.

AI Engineering Intern & Contributor

Remote

NimitAI

August 2026 – Present

- Conducted an extensive 80-file Supabase backend audit and QA testing across a 147-case test workbook to verify data integrity and platform reliability.
- Automated GTM lead generation pipelines by deploying an agentic AI system, cutting manual prospecting effort and standardizing lead qualification.
- Standardized engineering workflows by generating structured GitHub issues for platform bug triage, feature tracking, and technical debt resolution.

PROJECTS

Autonomous B2B Prospecting & Agentic Web Engine

September 2026

Python, Playwright, LLM Orchestration, TDD

- Built AI outreach engine using Hermes Agent with 27-skill design system for automated lead scraping, qualification, and LLM-powered demo website generation with real business data.
- Engineered automated pipelines for CRM state tracking, follow-up scheduling, deployment validation via Vercel MCP, and outreach-readiness reporting with audit trails.
- Deployed full-stack system with optimized builds, CORS-configured HTTPS endpoints via Tailscale Funnel, 15+ REST API endpoints, and support for 4 concurrent users.

ULTRON v1 — Agentic OS & Desktop Automation

July 2026

Python, MCP, Multi-Agent Systems, Speech-to-Text

- Architected a voice-operated, plugin-based agentic framework featuring hierarchical multi-agent delegation, dynamically spawning sub-agents to execute multi-step tasks.
- Integrated Model Context Protocol (MCP) clients and plugin modules to standardize runtime tool discovery, context ingestion, and dynamic skill execution across frontier LLMs.
- Engineered local desktop actuation pipelines, enabling deterministic OS-level automation, process control, and system tasks via low-latency speech parsing.

Mehfil — Ambient Cultural Audio-Visual Platform

2026

React, Vite, Supabase Realtime

- Developed a low-latency web application leveraging the Spotify Web Playback SDK and Framer Motion for interactive, synchronized media streaming.
- Configured Supabase Realtime for live cross-client synchronization, managing distributed audio-visual state and ensuring fluid UI transitions.
